

Proposal for reduction of cost and man-hour

- 8-way built-in drivers connection between MONITOUCH and external devices
- Communication via dedicated built-in drivers to cut programming time

Before

A communication module is needed on a PLC to connect an external device. You need to code PLC programs to communicate with the controllers.

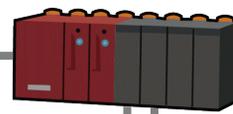

More external devices mean more comm modules. That means increasing the cost.

V9 series

PLC

Temperature controllers

Coding PLC program takes so much works. It is difficult to review the program...

Use 8-way communication!

After

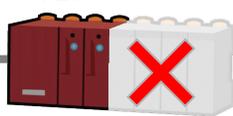

Just add devices to connect to the V9 and set the communication parameters to establish communication!

V9 series

CN1

PLC

MJ1

MJ2

Inverter

Temperature controllers

Good

Point 1

Comm. module

Direct connection, no comm module needed.
>> **Cost reduction!**

Point 2

No PLC program to communicate needed.
>> **Reduce application build time!**

Point 3

MONITOUCH acts as a gateway to exchange data among the device!

Point 4

Multiple brands and models supported!

Please turn over for data exchange function.

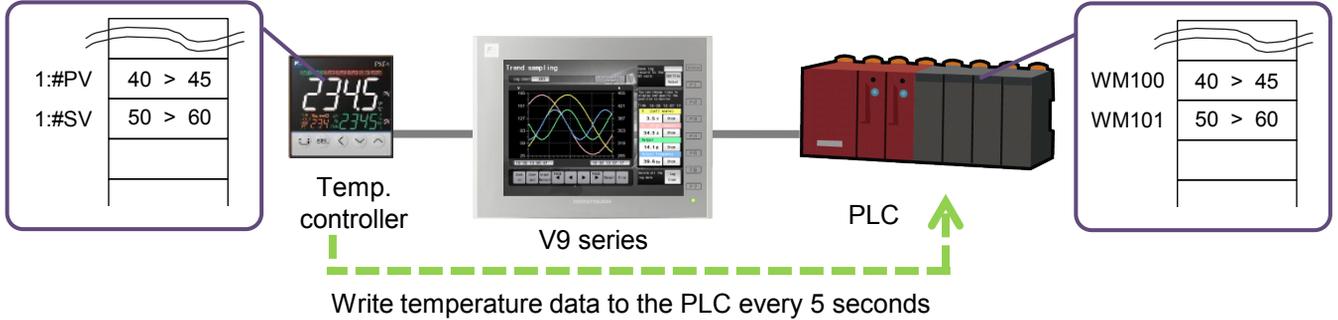

Device Memory Map to exchange data between the devices

By simply setting source and destination addresses, the device memory map exchanges data **without PLC program**.

Because this table runs in background, **communication load on the MONITOUCH is reduced** and as a result it does not affect screen refresh cycle.

Data can be exchanged **cyclically** or by a **trigger bit (rising edge triggered)** from a PLC.

E.g.) PV and SV of Fuji Electric's PXF are transferred to WM100-101 in the PLC every 5 seconds:

<Example of Device Memory Map settings>

No.	PLC2 Device	Name	Data Type	>> Target Device 1	>> Target Device 2
0	1:#302001	PV (process value)(Engineering unit)	Word	WM0000100	
1	1:#402003	Front SV(Engineering unit)	Word	WM0000101

Double-click

Device Memory Map Setting[0]

Function: Periodical Reading

Reading Cycle: High-speed Reading 5 sec

Target Device 1: PLC1 0 WM 0000100

Settings

(1) System Settings > Hardware Settings

1) Register a device to connect.

2) Match communication parameters to the ones for the device.

Communication Settings	
Connection Mode	In
Serial Level	RS-422/485
Baud Rate	9600BPS
Data Length	8-Bit
Stop Bit	1-Bit
Parity	Odd
Retarts	3
Time-out Time(100ms)	1
Send Delay Time(msec)	10
Start Time(msec)	0
Code	DEC
Text Process	LSB-MSB
Comm. Error Handling	Stop
Detail	2
Priority	2
System device(V7) Compatible	None
Format Softness	None
Use Connection Check Device	None

(2) System Settings > Device Memory Map
