

## [Suggestion for efficiency improvement] Automate transfer tasks using V-Server

### What is V-Server?

V-Server is a software that allows you to collect and store field information through MONITOUCH by connecting a PC to MONITOUCH via Ethernet. Also, V-Server supports the MONITOUCH screen program transfer and system upgrade.

#### Before

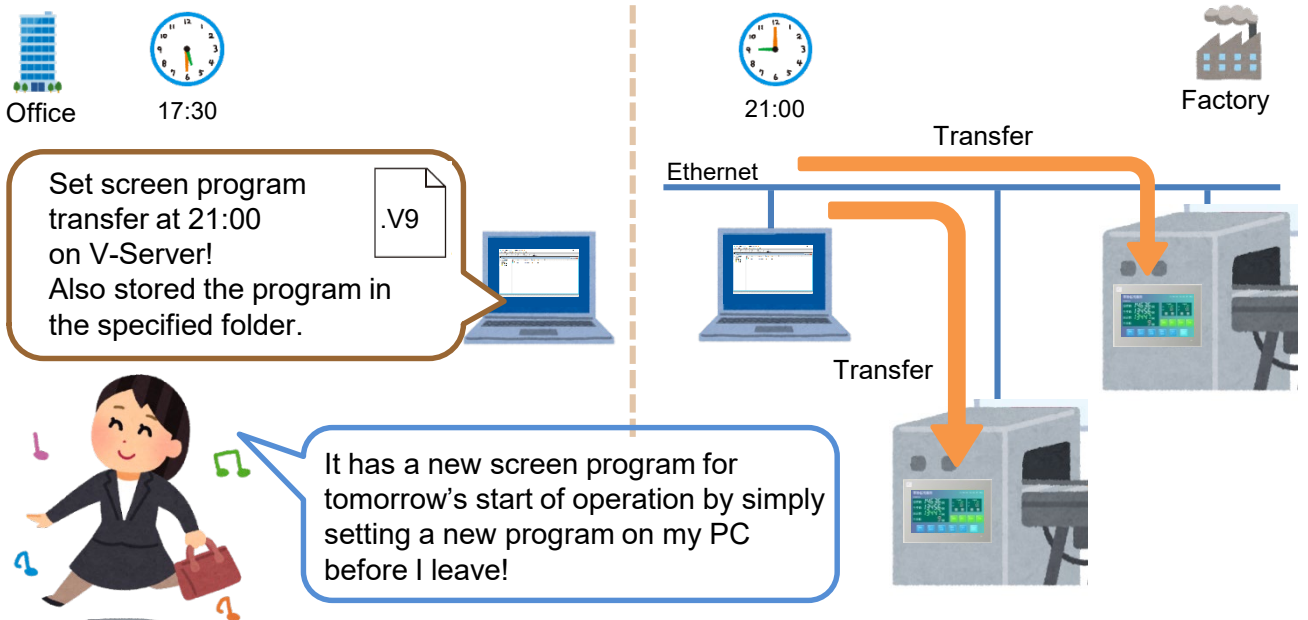

It is possible to update a screen program only after the operation of the machine is completed.

### With the introduction of V-Server...

#### After

You can specify the time to transfer the screen program automatically.

Function used in this example

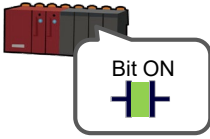

V-Server's **Event function** 

Action time

OR

Trigger bit ON

**Runs V-Server functions!**

**Actions that can be performed by the Event function**

- Start Application
- Read/write recipe data
- Start/stop logging
- Excel logging options  
(create a backup file, open/close a file)
- Read sampling (CSV, Excel, or database)
- Storage information (read/write data)
- Screen program transfer

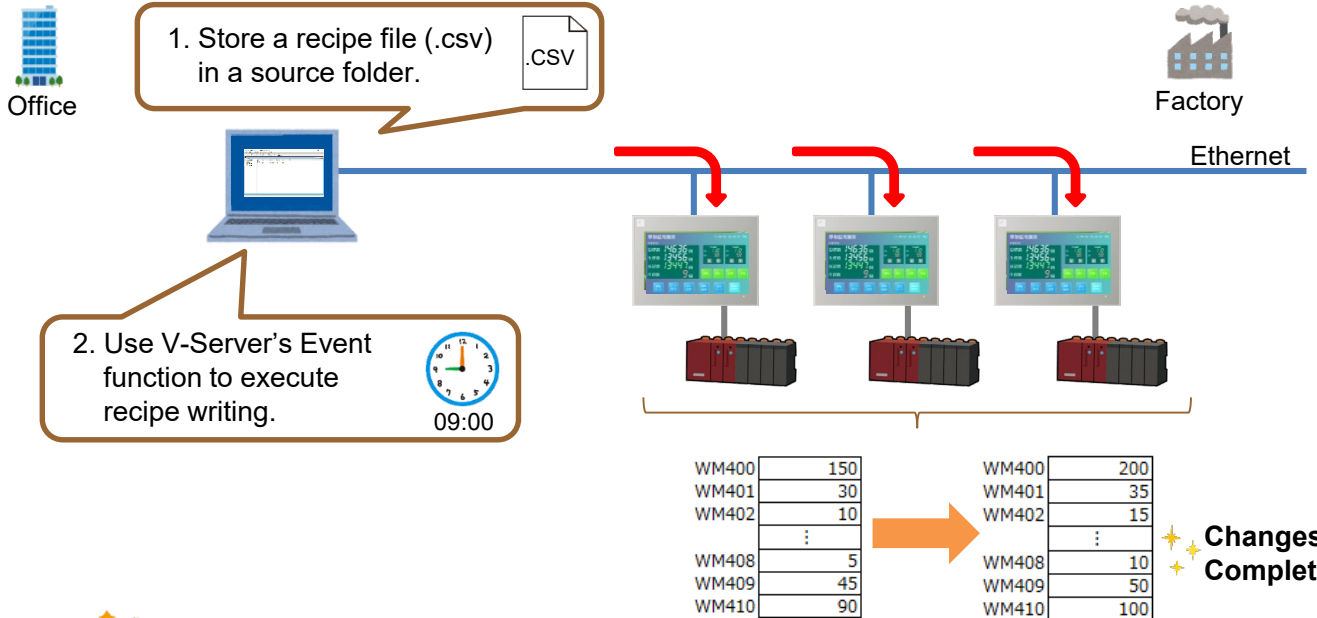

I can execute various functions!

Another useful tip!

Easy parameter changes from the office 

No need to rush to the site! 

You can download V-Server from our website. It is free to run for an hour. Give it a try!
