

TECHNOSHOT Series Data Upload Prohibition

Issue No. 99 (August 2017)

For manufacturers !

Have you ever worried about the screen data management of delivered machines.

We have the best solution for this problem !

Now

You have to use password function for preventing unauthorized data leakage or unauthorized falsification of data.

But !

In the unlikely event that someone gets the password by using the special measures, the data uploading is possible.

TS series

Upload

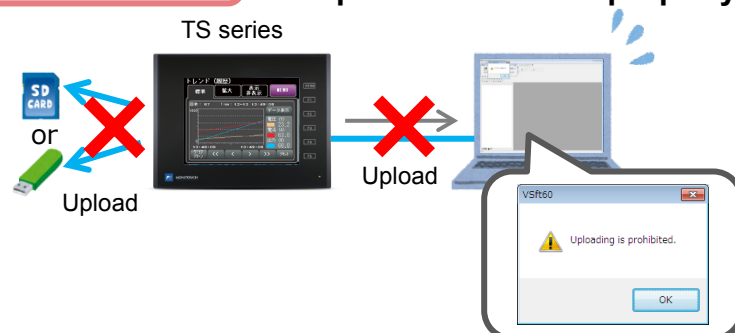

Upload

When you use Data Upload Prohibition function of TECHNOSHOT series...

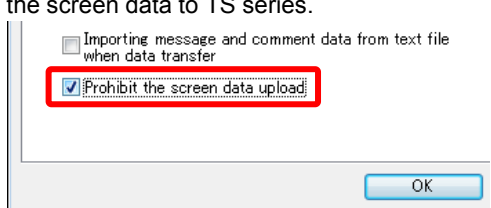

Improvement

This function makes data upload from TS series prohibited to keep the screen data property safe.

How to setup ?

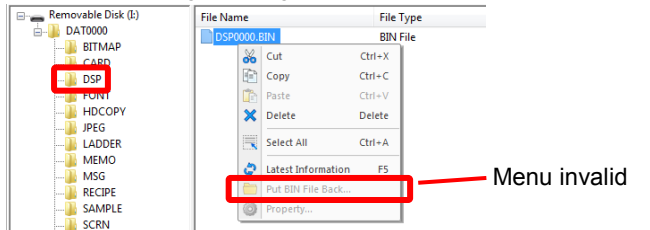

Check [File] > [Property] > [Transfer] > [Prohibit the screen data upload], and transfer the screen data to TS series.

This function is also valid when executing data upload by using storage devices.

Storage Manager

One-click setting adds new security function to TECHNOSHOT series. This function never permits unauthorized data leakage to bring peace of mind to all customers !
