

**V9 series
Web Machine Interface
VPN Remote Access Service**

NEW

Continuing from issue No.47(June 2014) of Web Machine Interface VPN Remote Access Service, this Monitouch Express explains its features and introduces the steps to connect VPN. Monitouch VPN which is Simple, Safe, and Economical, significantly changes the concept of the existing remote monitoring and maintenance. Please experience our Web Machine Interface VPN Remote Access Service on this occasion.

VPN Remote Access Service Features

All V9 series models are supported

Additional devices like VPN Routers and Option Units are not necessary to prepare because **All V9 series Models have VPN functions.**

Routing function

By V9's routing function, not only V9 series but also **PLCs and other devices connected to V9 series via Ethernet can be remotely accessed.**

*Only available with V9 series models supporting LAN port 2CH.

Hakko Electronics provides necessary environments

We provide for VPN server and VPN connection software (V-Connect). Customers do not need to prepare the environment such as a server.

High security

Because our VPN supports SSL-VPN, you can remotely connect and access to devices without worrying about eavesdropping and Data tampering.

VPN Remote Access Service Steps

| | |
|--------------|--|
| STEP1 | Download Management tool (V-Connect) Please download V-Connect (for free), the Management tool for PC connection to VPN, from Hakko Website. |
| STEP2 | Apply for Free License Please download Free License Application Form from our website and contact our distributor in your country after filling out required introduction on the form. |
| | Apply for Fare-paying License Please download fare-paying License application form from our website when you want to apply for fare-paying license or change from Free License to fare-paying License. Please contact our distributor in your country after filling out necessary required information on the form. |
| STEP3 | VPN Connection on V9 1. Set the LAN setting (IP address, etc) on V9 local screen. 2. Connect VPN server by setting ID of the destination/ Node ID/ Node Password (Proxy settings if necessary). |
| STEP4 | VPN Connection setting on PC VPN connection is established by selecting the destination from the management tool (V-Connect). |

*The above steps will be changed after October 2014.

After October 2014, please check the renewed steps on our website.

Download the application form and management tool
