

Go paperless with V9 series!  
We will introduce how to utilize the PDF viewer.

- What is the PDF viewer?
- It is easy to add and renew PDF files.

## What is the PDF viewer?

It is a function to display PDF files on the screen of V9 series. You can view PDF files like manuals and operating instructions on Monitouch.

\*PDF files need to be stored in the SD card/USB flash drive beforehand.

## By using PDF viewer function of V9 series...

We will introduce another convenient point. 

It is easy to add and renew PDF files.

It is possible to add and update PDF files without removing the SD card/USB flash drive from V9 if you have an Ethernet environment!

When V9 new function “scheduler” is combined with another V9 new function “data transfer service”, it is possible to transfer files automatically. 

For example,

1. Save next day’s operating instructions in the designated folder at the office before going home.

2. Set an arbitrary bit of PLC to ON by scheduler function at 7:30 AM of the next day and use data transfer service! The document in the SD card in V9 is replaced with what was prepared last night!

This way saves the trouble to renew data by hand even when some V9 are on site!

How would you like to start to improve operational efficiency through going paperless on site?
