

V9 Advanced series contains built-in Wireless.

- Communicate directly with built-in wireless without using any external access point devices.
- Easily monitor as well as control via tablets using VNC Server function.
- Download/Upload of V9 screen program as well as ladder program wirelessly.
- Use V9 series as a gateway to exchange the data between the machines.

Compatibility with Tablets (Mobile Devices)

Built-in Access Point Function

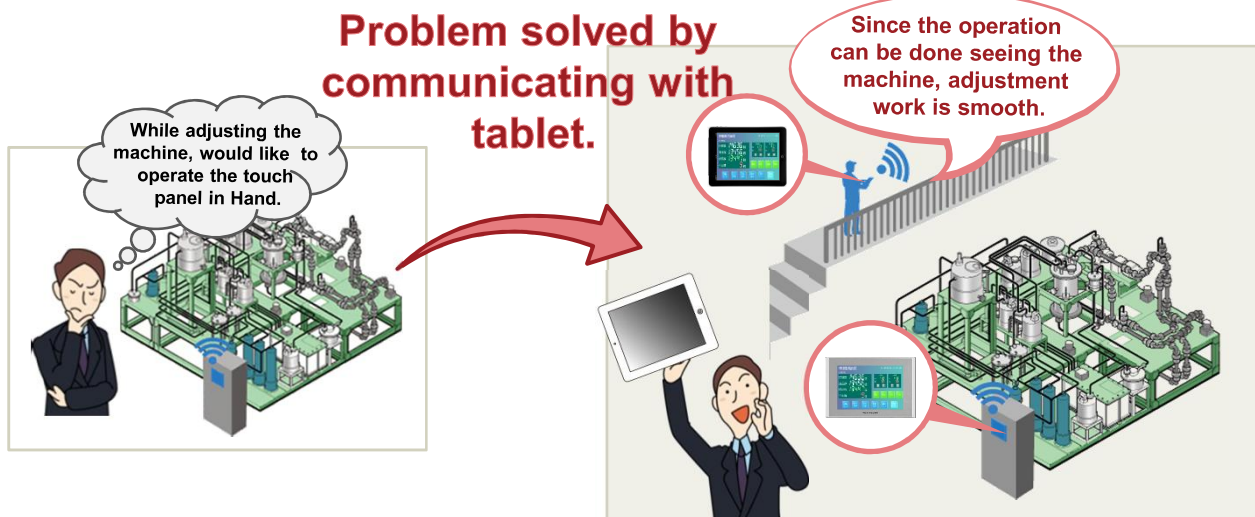

Access Point is inbuilt in wireless LAN model. Hence, no need to use external access point device for communication.

* Operation prohibition option is available.

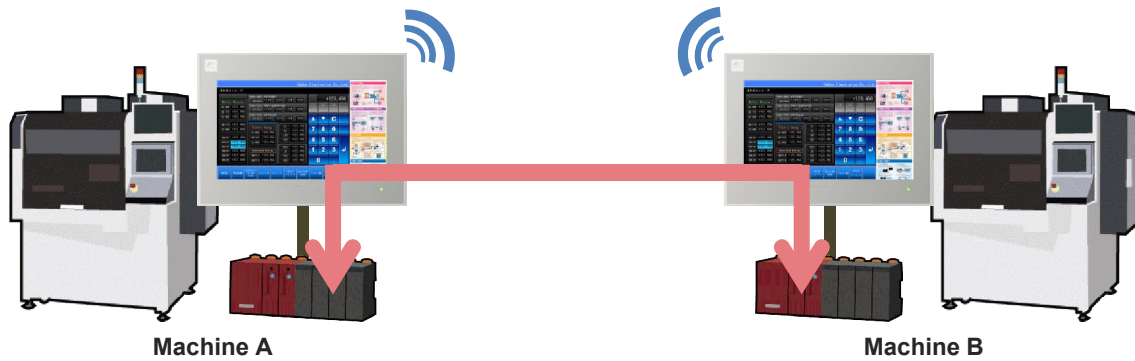

VNC Server Supported

All the V9 series models support VNC function. License is not required. With tablets one can monitor and control the MONITOUCH at site remotely.

Exchanging Data Between the Panels

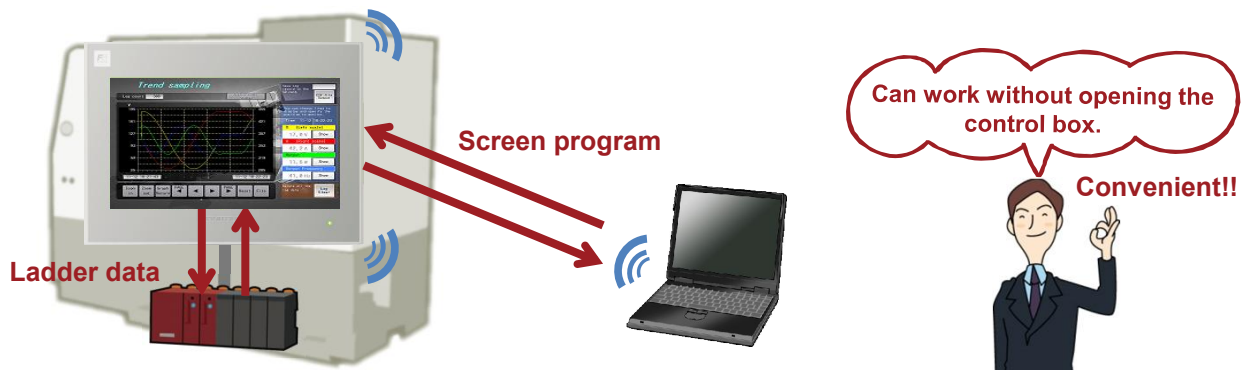

Data can be transferred within the machine using V9 as a gateway. Hence, it is possible to share the data between the machines.

Quick action can be taken by sharing the alarm information of different machines. Hence, it helps shortening the down time and increase the efficiency of machine.

Ladder Transfer Wirelessly

Transferring the screen data to V9 and the ladder data to the PLC connected to V9 with PC can be done on wireless. Hence, no need to open the control box and use wires for data transferring.

| Series | Model | Wireless LAN | Extended wire LAN | Release Time |
|-------------|------------------------|--------------|-------------------|----------------------------|
| V9 Advanced | V910xiWRLD | Yes | Yes | Nov.2014 |
| | V907xiWRD | | No | To be released in Feb 2015 |
| V9 Standard | V9150iXRD | Yes | No | To be released in Apr 2015 |
| | V9120iSRD | | | To be released in Feb 2015 |
| | V9100iSRD V9080iSRD | Yes | No | To be released in May 2015 |
